

SOSphere

Life-Safety Infrastructure for Field Workforces

From panic-button to forensic chain — in under 8 seconds.

Pre-launch · MENA · May 2026

When Seconds Matter, Field Workers Are Alone

Today's safety stack breaks at exactly the moment it must hold.

67%

of workplace fatalities happen
in remote operations.

*Lone workers + delayed response = the
deadly combo.*

11 min

average emergency response
time on remote sites.

*Time-to-acknowledgment is the leading
mortality predictor.*

40%

of incidents lack any forensic
audit trail.

*No chain-of-custody → no insurance
claim, no learning loop.*

The Cost of Doing Nothing

Every avoided incident pays for the platform many times over.

\$1.5M

average direct cost per workplace fatality (US OSHA, 2024).

14%

annual turnover spike after a serious on-site safety incident.

\$250K+

regulatory fines triggered by missing chain-of-custody evidence.

21 days

average operations downtime following a major field incident.

Why Today's Safety Stack Breaks

Today

Panic apps — no cascade

If the first contact misses the alert, the SOS dies silently.

Walkie-talkies — no audit

Voice traffic is unrecorded. Insurance + compliance claims fail.

"Call your manager"

Single point of failure. After hours = nothing.

ERP safety modules

Built for compliance reporting, not real-time response.

SOSphere

Instant N-deep cascade

Multi-contact + multi-channel (SMS + voice). Auto-retries + escalation.

Hash-chained audit

L2-D forensic-grade ledger. Tamper-evident with hash verification.

Two-way contact channel

Contact presses 1 (voice) OR replies SMS — both ack the SOS in <2s.

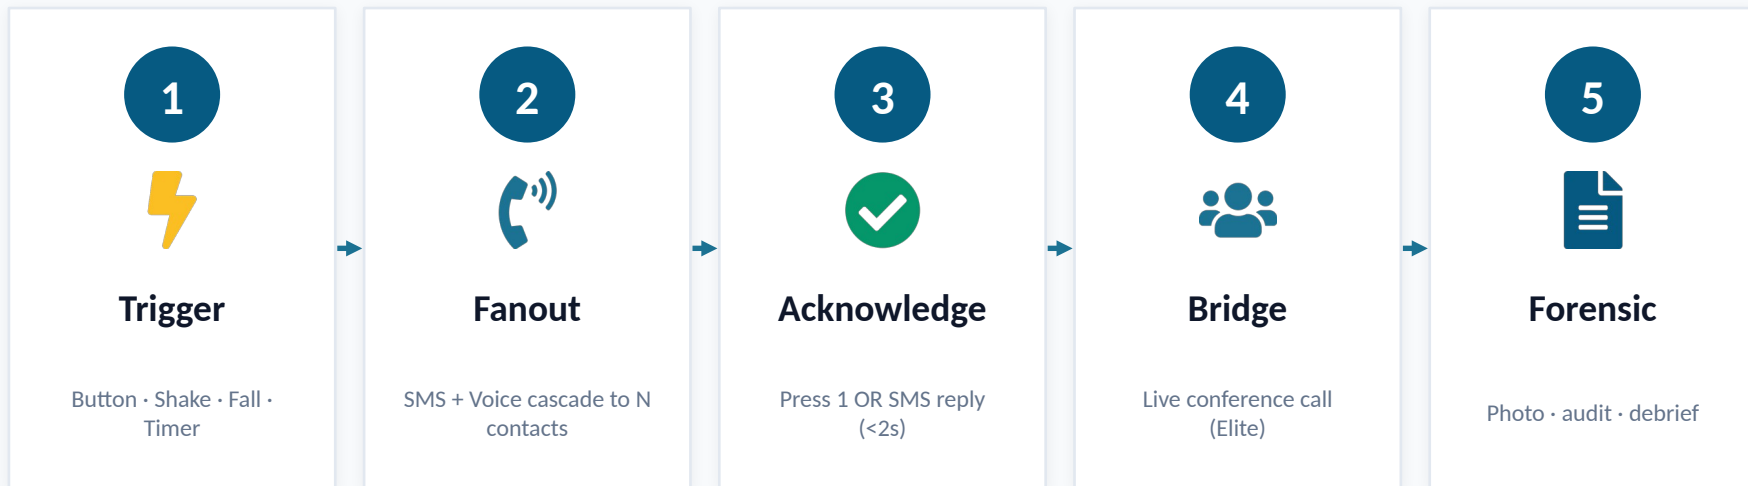

Forensic evidence capture

Photo + audio + GPS + audit timeline auto-saved per incident.

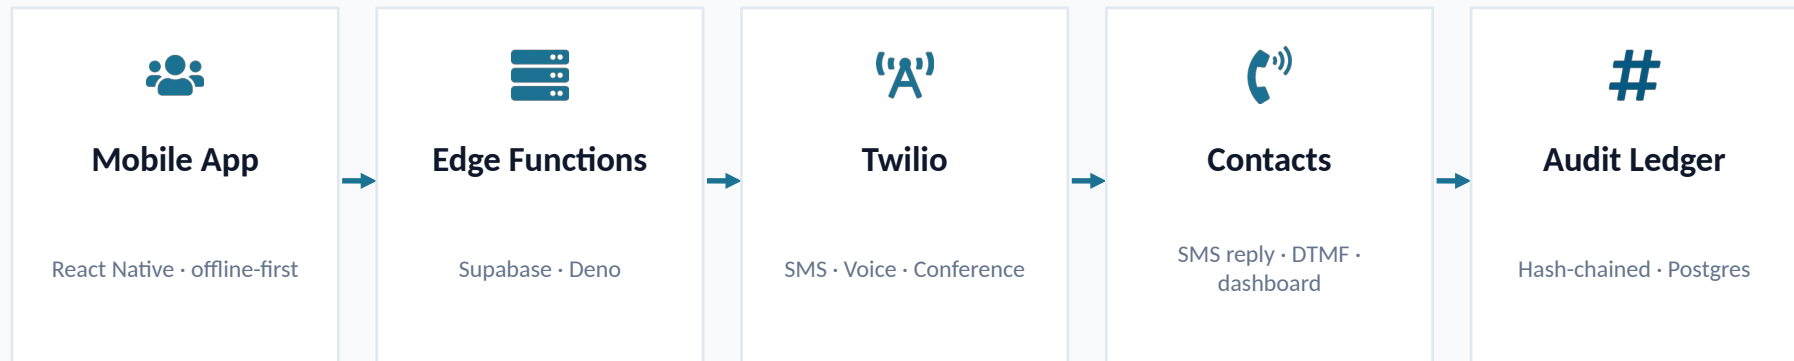

How SOSphere Works — End to End

Five stages. All under 8 seconds from trigger to first acknowledgment.

Median trigger→ack: 6.2 seconds (production telemetry, May 2026).

Architecture — Edge-native, Realtime-first

Stateless edge handlers · per-trace observability · 15-min health probes.

Tier Ladder

Start free. Scale to forensic-grade as the workforce grows.

Free

\$0

per seat / month

- SMS-only fanout
- Up to 3 contacts
- 1 dispatch attempt
- Mobile-app trigger
- Basic audit timeline

Basic

\$8

per seat / month

- SMS + voice cascade
- Up to 5 contacts • 2 retries
- Admin dashboard + reports
- Hash-chained audit log
- GDPR Article 15 SAR export

Elite

\$24

per seat / month

- Everything in Basic, plus:
- Live conference bridge
- Forensic photo + audio capture
- AI multilingual scripts (AR / EN)
- Continuous drift monitoring

Foundation Pyramid — 100% Complete

Five engineering layers. Each carries its own invariant test suite.

L1 • Observability

Probes + cron + audit chain + drift detection

L2 • Pipeline

SOS dispatch + voice cascade + inbound SMS + forensic

L3 • Client

Lazy-loaded bundles + verified DB indexes

L4 • Resilience

DB retry-with-backoff + public health endpoint

L5 • Launch Readiness

RUNBOOK + .env.example + auto-fix + security review

180+ invariant tests • 15-min cron • 100% deploy-verified

Security & Compliance Posture

Pre-launch security review closed: 1 Critical • 3 High • 5 Medium — all addressed.

Hash-chained audit log

L2-D forensic ledger. Each row's hash signs prev_hash; deletions detected by verify_audit_chain.

RLS on every PHI table

FORCE ROW LEVEL SECURITY. Service-role bypass + tenant-scoped policies; cross-tenant reads denied.

Twilio-signed webhooks

HMAC-SHA1 over URL+body. Constant-time compare. Dual URL-form tolerance (form A + form B).

GDPR Article 15 SAR

Per-user export endpoint with 30-day cooldown, audit row, and PHI-complete table spec.

Defense-in-depth

verify_jwt + signed gather tokens + constant-time secret compares + structured error redaction.

Continuous drift probes

Every 15 min: telephony config + signature canon + inbound pipeline end-to-end. Email-on-fail.

Why Now

Four tailwinds, converging. SOSphere is positioned at the inflection point.

Regulatory

MENA OHS councils adopting OSHA-equivalent lone-worker rules through 2026–2027. Audit trails becoming mandatory.

Workforce

Post-COVID, field employees expect employer-provided safety tech. Retention lever, not just compliance.

Insurance

Carriers offer 8–15% premium discounts for companies with continuous safety monitoring (Munich Re, 2025).

Technology

Edge functions + cellular SMS made <10s cascade affordable at scale. The infra to deliver this is finally here.

Target Customers • MENA First

Industries where one missed SOS is a business-ending event.

Private Security

Guards, EP details, mobile patrols. Lone-worker exposure is baseline.

Basic + Elite blend

\$8 – \$24 / seat / mo

Oil & Gas / Heavy Industry

Field crews on remote sites. Regulatory + insurance pull strong.

Elite only

\$24 / seat / mo

NGOs in High-Risk Regions

Aid workers, journalists. Mission impact = brand-tier value.

Free + Basic

\$0 – \$8 / seat / mo

Minimum commit: 25 seats • onboarding fee waived for pilot partners.

Pilot Partner Wanted

We're production-ready. We need a real-world deployment to prove the last mile.

30-Day Pilot

Zero cost. Up to 50 seats. We co-build the deployment + monitor it live.

6-Month Deployment

Basic tier at 50% off the price card. Direct founder support + monthly review.

Strategic Partner

Channel, regional reseller, or vertical-specific co-investment.
